

An International Panel on Inequality | Academics Letter to World Leaders

Dear World Leaders,

We write to you as **academics** and **inequality experts** from **XX** countries to call for your support for the creation of an International Panel on Inequality, an independent, scientific body tasked with assessing the state of knowledge on inequality, with an uncompromising commitment to academic rigor, independence and credibility. Inspired by the role of the Intergovernmental Panel on Climate Change (IPCC), an IPI would stand in a strong tradition of scientific bodies that have contributed to policymaking in crucial areas through rigorous presentation of evidence and analysis.

The establishment of an International Panel on Inequality was the primary recommendation of last year's G20 report on inequality, written by a group of inequality experts chaired by Nobel Prize winning economist Joseph Stiglitz at the request of President Ramaphosa during South Africa's chairing of the G20. This proposal has received widespread international support, including that of the UN Secretary-General, and the Governments of South Africa, Brazil, Norway and Spain have been working with the academic experts on the committee towards the founding of the IPI.

High levels of inequality within and between countries drive many of the economic, political, societal and environmental challenges we face today, leading many to conclude that we have an inequality crisis just as we have a climate crisis.

As experts from a wide range of disciplines, including economists, political scientists, climate scientists, sociologists, epidemiologists, anthropologists, historians, geographers and philosophers, we all recognise that inequality touches every aspect of human life and progress. We are profoundly concerned that **extreme concentrations of income and wealth translate into undemocratic concentrations of power**, unravelling trust in our societies and polarising our politics.

We believe too that **inequality is a policy choice** and can be reversed. To address these extreme concentrations of wealth and income requires a **shared scientific consensus** on inequality. An International Panel on Inequality would help the world to create such a consensus. It would provide the knowledge basis for addressing the inequality crisis in the most effective way.

There are three ways you can show your support.

South Africa, on behalf of the four founding governments, has invited you to attend a key high-level leader's event on the morning of the 23rd September with the UN Secretary General. **We urge you to attend this High-Level Leaders event on 23rd September**, to express your support for the creation of an International Panel on Inequality.

We also **call on you to support the vision statement for an IPI**, also circulated to you by the South Africa on behalf of the four governments.

Finally, we urge you to agree **join them in a growing coalition of governments in support** of establishing this panel as soon as possible.

We believe that the establishment of an IPI is in the interests of all policymakers and leaders who recognise the importance of this issue and understand the need to base our international

response on **sound data, evidence and analysis, wherever they are on the political spectrum**. It would be a vital first step towards building a more just and equal world.

Yours,
